DETAILED ACTION

The following is a quotation of the appropriate paragraphs of 35

U.S.C. 102 that form the basis for the rejections under this section made in this

Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 3-6, 11, 13-28, 37-43 and 45 are rejected under 35 U.S.C. 102(e) as being anticipated by Blanco [US. 2005/0064935].

As to claims 1 and 27, Blanco teaches a user interface for permitting a user to control the media content analysis and media representation generation (page 1, 0007); and a media analysis software module for analyzing features of the media content (page 4, 0053), the media analysis software module being communicatively coupled to the user interface to receive media content analysis instructions (page 4, 0058).

As to claim 3, Blanco teaches processing logic for controlling display of a user interface (page 1, 0042).

As to claims 4 and 28, Blanco teaches processing logic for controlling the generation of a media representation (page 1, 0007-0008).

As to claim 5, Blanco also teaches hardware for writing a media representation in digital format (page 2, 0031).

Art Unit: 2179

As to claim 6, Blanco teaches a storage medium for storing media representations written in digital format (page 2, 0031-0033).

As to claims 11 and 45, Blanco teaches a data structure for representing transformation of media content (page 1, 0007-0008).

As to claim 13, Blanco also teaches the user interface further comprising a selection menu for allowing a user to select feature analysis to be performed on media content (page 1, 0008).

As to claims 14 and 40, Blanco teaches a field for setting a threshold on confidence values associated with results of the media content analysis (figure 12).

As to claims 15 and 42, Blanco also teaches at least one field for managing and modifying display of media information on a media representation (page 1, 0007).

As to claims 16 and 41, Blanco teaches a preview field for previewing active media frames within selected media content (page 4, 0053).

As to claim 17, Blanco also teaches a preview field for previewing the media representation being generated (page 4, 0053-0054).

As to claim 18, Blanco teaches one content selection field for selecting segments of media content from at least one source to be displayed in a media representation (page 1, 0008-0009).

As to claims 19 and 43, Blanco also teaches a selector that a user can se along the content selection field in order to select segments to be displayed in a

Art Unit: 2179

media representation (page 4, 0060-0061).

As to claim 20, Blanco teaches graphical illustration of media content from which a user can view media content and select segments of media content (page 4, 0060-0061).

As to claim 21, Blanco also teaches an audio waveform timeline displaying audio content (page 5, 0070).

As to claim 22, Blanco teaches a video timeline displaying video frames extracted from video content (page 5, 0070).

As to claim 23, Blanco also teaches a video timeline displaying text extracted from video content (page 2, 0025).

As to claim 24, Blanco teaches a field for displaying the results of media content analysis, the results being displayed as defined segments along a timeline (page 5, 0070).

As to claim 25, Blanco teaches an output device driver module for driving the media content analysis (page 2, 0023) and the media representation generation, the output device driver module being communicatively coupled to the user interface to receive user instructions (page 2, 0023-0024).

As to claim 26, Blanco also teaches an augmented output device for generating a media representation, the augmented output device being communicatively coupled to the media analysis software module to receive transformed media data, the augmented output device being communicatively

Art Unit: 2179

coupled to the output device driver module to receive instructions for media representation generation (page 3, 0036).

As to claim 37, Blanco teaches storing media content on a storage medium that is accessible to augmented output device (page 4, 0051).

As to claim 38, Blanco teaches "using a user interface to display media content formatting options to a user" (page 2, 0031-0032).

As to claim 39, Blanco teaches selecting an analysis technique to be applied to media content, wherein the analysis technique recognizes defined features in the media content (page 5, 0070-0075).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the

Art Unit: 2179

applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 2, 7-10, 12, 29-36, 44, 46-48 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blanco [US. 2005/0064935] in view of Freedman [US. 2004/0249650].

As to claim 2, Blanco fails to clearly teach content recognition software for recognizing features in media content. However, Freedman teaches the content recognition software at page 18, 0087. It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to combine the teaching of the content recognition software with content media analysis of Blanco. The motivation of the combination would have been for the advantage of increasing an operation speed in the media representation generation.

As to claims 7 and 48, Blanco fails to clearly teach the media representation being generated in paper format. However, Freedman teaches feature at page 15, 0064. It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to combine the teaching of the content recognition software with content media analysis of Blanco. The motivation of the combination would have been for the advantage of increasing an operation speed in the media representation generation.

Art Unit: 2179

As to claim 8, Blanco fails to clearly teach the paper format including at least one user-selectable identifier allowing a user to access and control media content. However, Freedman teaches feature at page15, 0064. It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to combine the teaching of the content recognition software with content media analysis of Blanco. The motivation of the combination would have been for the advantage of increasing an operation speed in the media representation generation.

As to claim 9, Blanco fails to clearly teach at least one barcode printed on the media representation. Freedman teaches feature at page 15, 0064. It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to combine the teaching of the content recognition software with content media analysis of Blanco. The motivation of the combination would have been for the advantage of increasing an operation speed in the media representation generation.

As to claims 10 and 44, Blanco also teaches at least one play identifier that can be selected to play an associated media content (page 1, 0007).

As to claim 12, Blanco fails to clearly teach a communication monitoring module for monitoring communication between the components of the system, wherein the communication monitoring module forwards requests for information and replies to requests among system components. However, Freedman teaches features at page 3, 0017. It would have been obvious to one

Art Unit: 2179

of ordinary skill in the art, at the time the invention was made, to combine the teaching of Blanco. The motivation of the combination would have been for the advantage of increasing an operation speed in the media representation generation.

As to claims 29 and 32, Blanco fails to clearly teach performing speech recognition on the media data. However, Freedman teaches the feature at page 8, 0045. It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to combine the teaching of Blanco. The motivation of the combination would have been for the advantage of increasing an operation speed in the media representation generation.

As to claim 30, Blanco fails to clearly teach the optical character recognition on the media data. However, Freedman teaches the features at page 15, 0064. It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to combine the teaching of Blanco. The motivation of the combination would have been for the advantage of increasing an operation speed in the media representation generation.

As to claims 31 and 34, Blanco fails to clearly teach analyzing features of media data further comprises performing face recognition on the media data. However, Freedman teaches the features at page 15, 0064. It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to combine the teaching of Blanco. The motivation of the combination would have

Art Unit: 2179

been for the advantage of increasing an operation speed in the media representation generation.

As to claim 33, Blanco fails to clearly teach performing speaker detection on the media data. However, Freedman teaches the features at page 9, 0048. It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to combine the teaching of Blanco. The motivation of the combination would have been for the advantage of increasing an operation speed in the media representation generation.

As to claim 35, Blanco fails to clearly teach performing event detection on the media data. However, Freedman teaches the features at page 6, 0040. It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to combine the teaching of Blanco. The motivation of the combination would have been for the advantage of increasing an operation speed in the media representation generation.

As to claims 36 and 46-47, Blanco fails to clearly teach adding a print function to a media rendering application for printing a media representation. However, Freedman teaches the features at page 15, 0064. It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to combine the teaching of Blanco. The motivation of the combination would have been for the advantage of increasing an operation speed in the media representation generation.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mylinh Tran. The examiner can normally be reached on Mon - Thu from 7:00AM to 3:00PM at 571-272-4141.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Weilun Lo, can be reached at 571-272-4847.

The fax phone numbers for the organization where this application or proceeding is assigned are as follows:

571-273-8300
